## SUMMARY

Cybersecurity student at Bowie State University with hands-on experience troubleshooting Windows and Linux systems, managing Active Directory, and supporting self-hosted server environments, currently working to complete the CompTIA Network+ and Security+ certifications. Experienced working directly with non-technical staff to resolve issues and document solutions through a City of Baltimore IT internship. Eagle Scout known for reliability, professionalism, and clear communication.

## EDUCATION

### B.S. Computer Technology in Cybersecurity — Bowie State University, Maryland

*Expected December 2026 | GPA: 3.2 / 4.0*

Relevant Coursework: Client Operating Systems, Windows Server Administration, PC Architecture, Computer Networking, Foundations of Computer and Network Security, Internet Technology, Database Development

Certifications: CompTIA Network+ and Security+ — in progress

## SKILLS

**Systems & Support:** Windows, Windows Server, Linux (Ubuntu), Active Directory administration, account and access management, hardware/software troubleshooting, PC architecture, system maintenance and updates

**Virtualization & Cloud:** Proxmox, Docker, VMware, VirtualBox, Azure

**Networking:** TCP/IP, DNS, DHCP, VPN (WireGuard), firewall configuration, wireless networking, connectivity troubleshooting

**Tools & Productivity:** Microsoft Excel, Power BI, Git, command-line utilities, Python, SQL, Java

**Professional:** Customer-focused communication, technical documentation, cross-team collaboration, issue escalation and follow-through

## TECHNICAL PROJECTS

### Personal Home Lab — System Administration & Troubleshooting

- Built and maintain a multi-service server environment on Proxmox, deploying and supporting Docker-containerized applications (media server, game server) — including installs, updates, backups, and diagnosing service outages.
- Run a personal DNS server to monitor incoming network traffic and block unwanted applications at the network level; configured firewall rules and secure remote access via WireGuard VPN.

### Self-Hosted Web Server ([github.com/cyberskell/cyberskell-web-dns-server](https://github.com/cyberskell/cyberskell-web-dns-server))

- Deployed an Ubuntu Server running the Apache HTTP Server, configured with a custom domain and IP-based access control to restrict incoming connections.
- Set up Apache virtual hosts and DNS routing, then hardened the server against unauthorized access with firewall rules on top of Apache's own access controls; perform ongoing maintenance and patching.

### Mock Supercomputer / Virtual Cluster Build

- Built a 6-node Raspberry Pi cluster wired over a dedicated switch, configured to emulate a small HPC environment with static IP addressing and SSH-based cluster management.
- Diagnosed connectivity and configuration issues across the networked systems, from physical cabling to service-level configuration.

## WORK EXPERIENCE

### Full-Stack Database & Software Development Intern

*Baltimore City Fellows Internship — City of Baltimore, Office of the Comptroller | May 2025 – August 2025*

- Worked directly with non-technical staff across IT and operations teams to understand their needs, translate them into technical requirements, and deliver a dashboard that departments used daily.
- Led full-stack development of an interactive dashboard that automated previously manual daily data updates, reducing repetitive reporting work and improving data quality across departmental records.
- Documented development work and data processes to support handoff, training, and ongoing maintenance by city staff.

## LEADERSHIP & VOLUNTEER EXPERIENCE

- Eagle Scout — Boy Scouts of America: led and documented a multi-volunteer service project from planning through completion.
- BDPA Baltimore Metro, Charter Member (2023–Present) | BSU Collegiate Chapter, Project Coordinator (2025) | HSCC, Election Chair (2025) & Student Volunteer (2023–Present).
